

# Complete Feeding Wrapping and Cartoning Line for Multipacks of Yogurt

Friday, 11 July 2014 12:38

The PFM-CAMA experience in the dairy sector, with a wide range of installed solutions, has once more created a customised system to satisfy the requirements of a leading European yogurt manufacturer.

It's an integrated automatic packaging line featuring CAMA Triaflex robot, a flow-wrap machine [PFM SCIROCCO](#) and a CAMA Wrap Around Case Packer.

CAMA Group's Triaflex Robot, coupled with an intelligent vision system, can work in three dimensions, with 360-degree head rotation, picking multipacks of yogurt from the production line belt and positioning them correctly into the feeding belt of the PFM flowwrap machine [SCIROCCO](#).

[PFM SCIROCCO](#) is a flow-wrap servo assisted horizontal wrapping machine for producing wraps hermetically sealed on three sides from a reel of heatseal wrapping material, it is equipped with the Long Dwell sealing system, which produces hermetically-sealed multipacks of yogurt reaching speed of 80 packs per minute.

Cantilevered machine construction with rounded corners, openable on all sides: thus it's quick and easy to clean in every point, visible or hidden.

By means of a conveyor, the multipacks are transferred into a CAMA wrap-around case packer.
