

## Development update

### All NEW: The Lantech C-400 Case Erector!

Proudly we present Lantech's new C-400 Case Erector. Based on your feedback we combined the benefits of the successful C-300 with wider case sizes.

The new C-400 Case Erector :

- Handles cases with dimensions up to 620 x 450 mm
- Capacity up to 8 case per minute
- Makes use of Lantech's robust and easy to use Tape heads for 50 and 75 mm wide tape
- Can handle Fefco 0200 and lower grade Fefco 0201 corrugated due to a standard Upper Retainer at the blank magazine
- Has a small and compact footprint
- In 30 minutes operator's learn to set up the machine to another case size

With the C-400 Case Erector you can help your customers in standalone and small integrated packaging processes with a robust and simple solution at an attractive price!

### Sidelbelts with Supergrip in Case Erectors and Case Sealers

Lantech is always keen to improve the performance of its machines. In situations with double wall corrugated cases with high gloss finish Lantech found that the reliability of the side belts was below the customers' expectations. After testing different solutions we found a supergrip belt that significantly improved the reliability of the case handling equipment.

For Lantech a reason to use this belt as the standard sidebelt in all our case erectors, case sealers and case packers. This new type of transport belt is interchangeable with the old style and can be ordered as retrofit for your machines.
